

wxWidgets static; Windows build; 64bit; MinGW;

HowTo compile static wxWidgets library for Windows using 64bit gcc compiler

1. Download MinGW64 from <http://mingw-w64.org/doku.php/download/mingw-builds>
2. I used MinGW version 8.1.0
3. Install MinGW with options as on image below

4. Path of my MinGW was C:\mingw-w64
5. Include MinGW path to system environments PATH as on image below

6. Download Windows wxWidgets source code from <https://www.wxwidgets.org/downloads/>
7. I used wxWidgets 3.1.6
8. Unzip wxWidgets to #ThisProject/dep/win
9. Open terminal and navigate yourself to #ThisProject/dep/win/build/msw
10. In same terminal execute this command:
mingw32-make.exe -f makefile.gcc SHARED=0 UNICODE=1 BUILD=release
11. This take time. f it succeed then libraries will be located in #ThisProject/dep/win/lib/gcc_lib

If build failing for you or you have any issues with compiling wxWidgets then check this official page for Windows build:
